JLPT AI App, Progress Report No. 02, HP

Padauk Lab

Report	Period	Date	Prepared by
No. 02	Oct 12 to Oct 13, 2026	Oct 13, 2026	HP (Backend and Infrastructure)

You can share this file with your AI coding tool as project context, together with docs/api-contract.md.

1. Summary

The backend foundation is merged into main, and the first full team workflow (branch, pull request, review, merge) is complete. The API contract is written: 37 endpoints in 4 sections, now in pull request #2 for review. Several product decisions were made, including one correction: **the app is for JLPT N1 only**.

2. Completed this period

No.	Task	Owner	Status
1	Pull request #1 (backend skeleton, Dockerfile, docker-compose) reviewed by LMHP and merged into main	HP, LMHP	Done
2	4th member joined Padauk Lab and the core team	HP	Done
3	Screen flow drafted with reference images: onboarding, dashboard, session, unit, saved words, settings	HP	Done
4	API contract v0.1 written in docs/api-contract.md (37 endpoints, 4 sections)	HP	In review (pull request #2)
5	Product decisions recorded (section 3 below)	HP	Done

3. Key product decisions

Area	Decision
Level	**JLPT N1 only**. Corrects the brief, roles document and Progress Report No. 01, which said N1 and N2
Language	All explanations, meanings, notes and AI answers in Burmese. Only the Japanese being learned stays Japanese
Sign up	Email, username and password, or Google. Stay logged in for weeks. Password at least 8 characters
Onboarding	One setup screen: last level (N1, N2, not taken), score (0 to 180), exam date (or not decided, default pace 3 units per day)
Units	Unlock in order. A unit is done when the user taps Mark as done. Saved words (bookmarks) included
Quiz	Every 5 units, 20 questions, instant feedback, 70% to pass, unlimited retakes, best score counts
Mock test	After each session. 45 language knowledge questions plus 3 readings (short, medium, long). One continuous strict 30-minute test, no pass mark, resume if the app closes
Pass prediction	Shown on the dashboard. Only the first attempt of each mock test counts. Reset all progress in Settings starts a new round

Area	Decision
AI	Only 2 buttons: More examples (units) and Why? (quiz and mock test review). No chat tab. Explanations saved and reused
Dashboard	Progress bar, pass prediction, today's goal, continue button, Proverb of the day (effort and consistency theme, with readings and Burmese meaning), 20 sessions
Navigation	Bottom tabs: Home, Saved words, Settings
Settings	Profile, study setup, notifications, change password, log out, delete account, reset all progress

4. API contract overview

Section	Covers	Endpoints
1. Onboarding	Login, sign up, Google, password reset, setup, study plan	#1 to #10
2. Dashboard, sessions and units	Dashboard, proverb, session, unit, mark as done, saved words	#11 to #18
3. Quiz and mock test	Start, answer, finish, review, resume, submit, result	#19 to #26
4. AI and settings	More examples, Why?, settings, notifications, devices, account, reset progress	#27 to #37

Who works with the API: HP builds all endpoints, LMHP calls them from the app. SWYH writes the AI functions that endpoints #27 and #28 call. ANK prepares content in the formats the contract defines.

5. What everyone should do now

1. Review your part of pull request #2 and comment on any line you want changed
2. Load docs/api-contract.md into your coding AI tool (`git fetch`, then `git checkout docs/api-contract`, or use main after it is merged)
3. Tell your AI to treat the contract as the source of truth, use the exact endpoints and field names, and not invent new ones
4. Pull main and run the backend once: `docker compose up --build`, then open http://localhost:8000/health

6. Next tasks (Week 1, Oct 12 to 18)

No.	Task	Owner	Depends on
1	Review and approve pull request #2 (API contract)	LMHP, SWYH, ANK	Nothing
2	Database design based on the contract (users, plans, sessions, units, words, grammar, progress, bookmarks, attempts)	HP	Task 1
3	Placeholder endpoints that return the contract's example JSON, so the app can connect early	HP	Task 1
4	Design system and onboarding and dashboard screens, using the contract's examples as fake data	LMHP	Task 1
5	One complete sample unit in the contract format (20 words, 1 grammar, readings, Burmese meanings, examples, quiz questions)	ANK	Task 1
6	First proverb list (effort, consistency, never giving up, not wasting time)	ANK	Nothing

No.	Task	Owner	Depends on
7	Compare LLMs on Burmese quality and cost, then agree with HP on the AI functions for More examples and Why?	SWYH	Task 1

7. Open decisions

1. Pass prediction formula (HP and ANK to propose)
2. Exact vocabulary, grammar and reading question split in the mock test template (ANK to confirm against the N1 format)
3. How last level and score change the daily pace in the study plan (HP to propose)
4. Which LLM to use (SWYH to propose)
5. Daily limit for More examples, currently 50 (team to decide after testing)
