JLPT AI App, Progress Report No. 04, HP

Padauk Lab

Report	Period	Date	Prepared by
No. 04	Oct 13, 2026 (afternoon and evening, after No. 03)	Oct 13, 2026	HP (Backend and Infrastructure)

You can share this file with your AI coding tool as project context, together with docs/api-contract.md and docs/database-design.md.

1. Summary

All 37 endpoints from the API contract now exist as placeholders that return the contract's example JSON, so the app can connect to the real backend today. HP reviewed the first pull requests from every teammate: LMHP's Expo setup and SWYH's LLM comparison are merged, and ANK's Unit 1 sample is waiting for its JSON version. The app now has a name: 急合 **(**きゅうごう**, Kyugo)**, meaning "fast pass".

2. Completed by HP

No.	Task	Status
1	Placeholder endpoints for all 37 contract endpoints, in 4 files matching the contract's 4 sections	In review (pull request #8)
2	Request shapes checked automatically: wrong fields or values are refused with 422	In review (pull request #8)
3	Start quiz (#19) and start mock test (#23) never include correct answers	In review (pull request #8)
4	/docs page shows all endpoints in 4 groups, in contract order, each labeled with its contract number	In review (pull request #8)
5	Reviewed LMHP's Expo setup (#7): 4 fixes requested, all fixed, approved	Merged
6	Reviewed SWYH's LLM comparison (#9): follow-ups listed for SWYH	Merged
7	Reviewed ANK's Unit 1 sample (#11): approval held until the JSON version is added; AI prompt prepared to convert it	Open
8	Found that the Team Brief PDF is out of date (still says "N1 and N2")	Fix planned

3. Placeholder endpoints at a glance

Section	File	Endpoints
1. Onboarding	backend/app/api/v1/onboarding.py	#1 to #10
2. Dashboard, sessions and units	backend/app/api/v1/dashboard.py	#11 to #18
3. Quiz and mock test	backend/app/api/v1/exams.py	#19 to #26
4. AI and settings	backend/app/api/v1/settings.py	#27 to #37

- No database, no login check and no AI call yet. Each endpoint always returns the same example.
- When an endpoint gets its real logic, its address and answer shape stay the same, so the app does not need to change.
- Dangerous actions need a typed confirmation: "DELETE" to delete the account, "RESET" to reset progress.

How to try it: `docker compose up --build`, then open http://localhost:8000/docs

Where the app runs	Base URL
Web browser or iOS simulator	http://localhost:8000/api/v1
Android emulator	http://10.0.2.2:8000/api/v1
Real phone	Not reachable yet. The backend only accepts connections from the same computer (a security setting). HP sets up a safe way when needed

4. Team highlights: the first day everyone's work landed

Member	What they did	Status
LMHP	Set up the Expo app: TypeScript (strict), Expo Router for screens, folders for the API, fake data, theme and components. Wrote a project README and linked the team rules in frontend/AGENTS.md	Merged (#7)
SWYH	Compared a local model (qwen2.5:7b) and a cloud model (gemini-2.5-flash) on 5 N1 questions with the same prompt and our JSON shape. Gemini: natural Burmese, correct explanations, about 7 seconds. Local model: about 138 seconds and unusable Burmese. Kept a prompt log	Merged (#9)
ANK	Made a Unit 1 sample with Claude: 20 N1 words and ～をものともせず, each with readings, Burmese meanings and 3 example sentences	Open (#11), JSON version next

5. Decisions made

Area	Decision
App name	急合 **(きゅうごう, Kyugo)**, meaning "fast pass". In app.json: name "急合", slug and scheme "kyugo"
Learning content	Stored as JSON only, one file per unit: data/units/s01_u01.json to data/units/s20_u10.json. No PDFs for units
PDFs in the repo	Only for progress reports (they never change after writing). Living documents (brief, roles, contract, design) are Markdown only
Reviews	When possible, wait for both reviewers before merging. Changes to real backend code or security wait for HP
Future reports	One team report written by HP, with a short section per member that each person checks in the pull request

6. Next tasks

No.	Task	Owner
1	Review and merge pull request #8 (placeholder endpoints)	LMHP, SWYH
2	Connect the app to the placeholder endpoints	LMHP
3	Update app.json to 急合 (kyugo), and remove unused template images	LMHP
4	Add Unit 1 as JSON to pull request #11, and remove the PDF	ANK
5	LLM follow-ups: move test files out of backend/app/, handle Why? when the answer was correct, test one newer Gemini model	SWYH
6	Remove the outdated Team Brief and Team Roles PDFs, and add the app name to docs/project-brief.md	HP
7	Real sign up and login endpoints (Section 1), with password hashing	HP

7. Open decisions

1. Pass prediction formula (HP and ANK to propose)
2. Exact question split in the mock test template (ANK to confirm against the N1 format)
3. How last level and score change the daily pace (HP to propose)
4. Which LLM to use: gemini-2.5-flash recommended by SWYH, final choice after testing one newer model
5. Daily limit for More examples, currently 50 (team to decide after testing)
6. Quiz question bank size, so retakes get a different mix (ANK, suggestion: 40 per quiz)
7. When content is corrected, should saved Why? explanations be regenerated? (HP and SWYH, suggestion: yes)
8. If someone signs up with email, then later uses Google with the same email, join the accounts or refuse? (HP to propose)
9. Add a Japanese definition field (meaning_ja) to the contract? (team, ANK's sample shows it is useful)
10. Environment setting names for the AI key: keep LLM_API_KEY and add LLM_MODEL? (HP and SWYH)
11. Keep frontend/.claude/settings.json (an AI tool setting) in the repo? (team)
