JLPT AI App, Progress Report No. 11, HP

Padauk Lab

Report	Period	Date	Prepared by
No. 11	Oct 31 to Nov 6, 2026	2026-11-06	HP (Backend and Infrastructure)

1. Summary

All 2,000 words are written, and Sessions 1 to 3 can be studied from start to finish. Deedeedar finished every unit for Sessions 5 to 10, and the whole word list has no repeats.

The Session 1 to 3 quizzes and mock tests are in the online database, so a user can now go from Session 1 all the way to the Session 3 mock test. Session 4's quizzes and mock test are in review.

LMHP's review found two real problems (a mock question that copied a quiz, and an AI crash on the server). Both are fixed.

The next big step: quizzes and mock tests for Sessions 5 to 10, and the mock test screen in the app.

2. Completed by HP

No.	Task	Status
1	AI study tip on the study plan (#97), LMHP's review comment fixed	Merged
2	Backend cleanup: the database allows only sessions 1 to 10, /health listed once in the API docs (#111)	Merged
3	Session 1 mock test (#112). Fixed 4 questions that repeated quiz sentences (found by LMHP)	Merged
4	Session 2 quizzes and mock test (#113), Session 3 quizzes and mock test (#114)	Merged
5	Session 4 quizzes and mock test (#118)	In review
6	AI fix: a missing AI setting now answers 503 "try again later" instead of crashing with 500 (#119, found by LMHP)	In review
7	Checked all 60 unit pull requests from Deedeedar (#120 to #179): file names, numbers, readings, examples, no repeats	Done
8	Merged 58 units, loaded 98 units, 6 quizzes and 3 mock tests into the online database	Done
9	Handoff file for AI assistants saved in the project, so a lost chat costs nothing	Done

Automated tests: 528 on main today, 530 when #119 is merged.

3. How the quizzes and mock tests are made

Item	Rule
Quiz	40 questions per quiz, 8 per unit: 2 kanji reading, 2 context, 1 paraphrase, 1 usage, 1 grammar form, 1 sentence order. A test picks 20 at random
Mock test	45 language knowledge questions in the official N1 split (kanji 6, context 7, paraphrase 6, usage 6, grammar form 15, sentence order 5), plus readings with 1, 3 and 4 questions
No repeats	Mock test words never appear in that session's quizzes. Each grammar pattern appears twice. Mock sentences are compared with quiz sentences
Fair answers	Answers spread evenly over a to d. Patterns with the same meaning (が早いか, なり, や否や) are never wrong options for each other
Checks	The content checker (`check_all`), a test load, and a review sheet with the answers marked for HP (N1)

4. Content checks on Sessions 5 to 10 (new this time)

Check	Result
60 units, each title, file name and inside numbers match	All 60 correct
20 words in every unit, no word or grammar pattern used twice in the whole app	2,000 different words, 100 different patterns
Every word reading compared with a Japanese dictionary (MeCab with UniDic)	27 differences, all 27 times the file was right
Each example sentence uses its own word	2 problems: #142 (揚げる, example uses 揚がる) and #150 (連なる, example uses 連ねる)

5. Team highlights

Member	What they did	Status
Deedeedar	Session 4 units (#102 to #110), Sessions 5 to 10, 60 units (#120 to #179). **All 2,000 words are done**	Merged (2 waiting for a small fix)
LMHP	Saved words as Burmese flash cards (#99), plan loading screen at least 3.5 seconds (#100)	Merged
LMHP	"More examples" on word and grammar cards (#115), hide Google login and the forgot-password link for now (#116), his first report (#117)	Merged
LMHP	Reviewed #97 and #111 to #114, and found the copied mock question and the AI crash	Done

6. Content status

Session	1 to 3	4	5 to 10
Units	30 of 30	10 of 10	58 of 60 (S7 U3 and S8 U1 waiting for a fix)
Quizzes	Done, online	In review (#118)	Not yet
Mock test	Done, online	In review (#118)	Not yet

- 98 of 100 units are in the online database.
- A user can study from Session 1 to the Session 3 mock test today.
- No proverb files yet. The format and loader are ready.

7. Lessons learned

What happened	What we do now
Loading all units at once dropped the Neon connection twice (`SSL error: unexpected eof`). Nothing broke, because the loader saves all or nothing	Load one session at a time. Later: make the loader send fewer database requests
A mock test question copied a quiz sentence word for word	Compare mock sentences with quiz sentences, not only the words
An approval stayed valid after new code was pushed	Turn on "Dismiss stale pull request approvals when new commits are pushed" in the `protect-main` rules

What happened	What we do now
87 old branches made GitHub hard to read	Deleted the merged ones. Turn on "Automatically delete head branches"

8. Decisions made

Area	Decision
Release	Team only for now, on Expo Go, $0. No App Store or TestFlight yet
Content making	HP makes the quizzes and mock tests with an AI assistant and reviews them as the N1 holder
Big reviews	`gh pr review --approve` in a loop, after the checks above
AI on the server	A missing AI setting means "AI off" (503), never a crash

9. Action needed

HP: add `LLM_MODEL` and `LLM_API_KEY` on Render (Environment page). Without them, every AI button answers "try again later".

Everyone, after pulling main (#111 added a database migration, so your local database needs it):

```
docker compose run --rm --build backend alembic upgrade head
```

10. Next tasks

No.	Task	Owner
1	Review #118 (Session 4) and #119 (AI fix)	SWYH, LMHP
2	Fix example 3 in #142 and #150	Deedeedar
3	Quizzes and mock tests for Sessions 5 to 10	HP (with ANK checking)
4	Mock test screen (#23 to #26), then forgot and change password screens	LMHP
5	Harder wrong options for the "usage" questions (LMHP: too easy for N1)	HP, ANK
6	Load units in fewer requests, Report 12	HP

11. Open decisions

1. Proverb of the day notification: what time to send it
2. Our own email domain, so reset codes really reach inboxes (before the public release)
3. When to get the Apple Developer membership (about ¥12,800 a year, needed for TestFlight or the App Store)
4. Who writes the proverb file
