JLPT AI App, Progress Report No. 07, HP

Padauk Lab

Report	Period	Date	Prepared by
No. 07	Oct 18 to Oct 19, 2026	Oct 19, 2026	HP (Backend and Infrastructure)

You can share this file with your AI coding tool as project context, together with docs/api-contract.md and docs/database-design.md.

1. Summary

The quiz is almost complete. The quiz question format and loader are merged, and the quiz endpoints (start, answer, finish, review) are built and in review. The Settings screen, proverb of the day, rate limits and the session and unit screens are now real on main. Saved words is built and in review. The mock test format and loader are merged, and GitHub now checks unit files on every pull request. SWYH merged the first real AI function (the Why? button) and chose gemini-3.8-flash. LMHP merged the design system and the login screen. Session 1 now has 7 units (140 words).

2. Completed by HP

No.	Task	Status
1	Rate limits on log in and sign up (contract v0.5)	Merged (#29)
2	Real session, unit and Mark as done (contract #13 to #15) with the unlock rules	Merged (#30)
3	Progress Report 06	Merged (#31)
4	Quiz question format, quiz loader and content guide (docs/content-format.md)	Merged (#33)
5	Real Settings endpoints (contract #29 to #33, #36, #37): profile, notifications, devices, delete account, start over	Merged (#34)
6	Proverb of the day: format guide, loader and endpoint (contract #12)	Merged (#36)
7	GitHub now checks every unit file automatically on each pull request	Merged (#37)
8	Mock test format guide and loader (docs/mock-test-format.md)	Merged (#38)
9	Saved words (contract #16 to #18): list with search, save, remove. 27 new tests	In review
10	Quiz endpoints (contract #19 to #22): start, answer, finish, review. 20 new tests	In review
11	Reviewed team work: #35, #39, #41, #42 and issue #44	Done

Automated tests: 204 on main today, 251 when saved words and the quiz endpoints are merged.

3. Security at a glance (new this time)

Protection	What it stops
Correct answers are never sent before the user answers	Cheating by reading the answer from the app's network traffic
One answer per question, checked on the server and in the database	Answering again after seeing the result
A quiz attempt can only be read by its owner (403 otherwise)	Seeing other users' answers and scores
Words in a locked unit can't be saved (403)	Reading locked content through saved words
Delete account needs the password and typing DELETE	Deleting an account by accident or from a stolen phone
At most 10 devices per user	Filling the database with fake devices
AI answers are checked in code before users see them	Broken or wrong-format AI output reaching users

4. Team highlights

Member	What they did	Status
LMHP	Design system, logo component and font loading. Login screen UI with a RubyText component for furigana (#35)	Merged
SWYH	Compared gemini-3.8-flash with gemini-2.5-flash and switched to LLM_API_KEY. Built explain_answer() for the Why? button, with output checks and tests (#42). Opened a plan for More examples (issue #44)	Merged
Deedeedar	Unit 8 of Session 1 (#41)	Merged

5. Content status

Session 1 unit	1	2	3	4	5	6	7	8	9	10
Status	Done	Done	Done	Done	Done	To do	Done	Done	To do	To do

- 7 of 200 units (3.5%), 140 words. New grammar: ～ともなると
- No quiz questions yet. Until Quiz 1 exists, units 6 to 10 stay locked for everyone (the rule working correctly)
- No proverbs or mock test files yet. The formats and loaders are ready

6. Decisions made

Area	Decision
AI model	gemini-3.8-flash, with gemini-2.5-flash as the fallback (was open decision 3)
Quiz bank	20 to 100 questions per quiz. Each attempt picks a random 20, so retakes get a different mix (was open decision 5)
Quiz units	Quiz 1 only covers units 1 to 5, Quiz 2 only units 6 to 10. The loader refuses anything else
Corrected content	When a question changes, its saved Why? answers are deleted and made again (was open decision 6)
Quiz review	Correct answers are shown only after finishing. Retakes are allowed and the best score counts
Unit files	Keep the flat data/units/sNN_uMM.json names (no session folders)

7. Action needed (everyone)

Update your own database after pulling main:

```
docker compose run --rm --build backend alembic upgrade head
docker compose run --rm -v "$PWD/data":/data:ro backend python -m
app.content.load_units /data/units
```

Content team: GitHub now checks unit files for you on every pull request. A red X means a file has a problem; open the check to see which one.

8. Next tasks

No.	Task	Owner
1	Review the saved words and quiz endpoints pull requests	LMHP, SWYH
2	Units 6, 9 and 10 of Session 1. Decide who does Unit 6	ANK, Deedeedar
3	Quiz 1 questions for Session 1 (units 1 to 5), following docs/content-format.md	ANK, Deedeedar
4	Why? endpoint (#28), using explain_answer(), saved answers and a shorter wait	HP
5	generate_examples() for More examples (issue #44)	SWYH
6	More examples endpoint (#27) with the daily limit, after task 5	HP
7	Mock test endpoints (#23 to #26): server timer, auto submit, resume	HP
8	Connect the app to the real backend: log in, setup, plan, session and unit screens	LMHP
9	Dashboard (#11) and change password (#34)	HP

9. Open decisions

1. Pass prediction formula (HP and ANK to propose)
2. Exact question split in the mock test (the format allows 45 questions plus 3 reading passages; ANK to confirm against the N1 format)
3. Daily limit for More examples, currently 50 (team to decide after testing)
4. Furigana in More examples: written by the AI or added by a code tool (SWYH, after testing)
5. If someone signs up with email, then later uses Google with the same email, join the accounts or refuse? (HP to propose)
6. Add a Japanese definition field (meaning_ja) to the contract? (team)
7. Keep frontend/.claude/settings.json (an AI tool setting) in the repo? (team)
